

Presentations: Interactive Timelines

Timelines are no longer constrained by space and functional limitations. With new technology, they can be digital and interactive. **Interactive timelines** enhance presentation and understanding by allowing a nonlinear, in-depth review of events and arguments.

The interactive format allows the attorney to control what is being seen by the jury or judge. This allows your audience to take in the information in easily manageable “chunks.” Also, by showing only the details the presenter wants, he or she can better focus on specific topics and themes.

This format also allows for the inclusion of documents and videos that “pop-out.”

ThemeVision has extensive experience preparing and presenting interactive timelines.
